The Technology

It's no secret that private information online won't be secret once a cyber-attack hits.

The truth is, bad passwords and compromised corporate login credentials (AD, LDAP) can cause you to lose your data, cost you thousands, or even get you blackmailed. If banking info or trade secrets get seized, your damages could be in the millions. Even biometrics is not fool proof, many of them can be spoofed or genuine user can be tricked into giving it. Key Fobs can be stolen, misused, and put back in place, resulting in all linked accounts being compromised in single attempt.

That's why, Rainbow Password, Rainbow Picture Password and Rainbow Smart Verification with geoACL technology are empowering people and businesses everywhere with better and easier password protection.

This is innovative, patented and award-winning technology that helps users and companies by giving them more options to create strong passwords.

Rainbow Password is 500 times stronger than traditional password formats, as it gives 17 million options for font colors and shading, 100+ combinations of font styles like Font, Size, bold, italic etc. Users with some difficulty recognizing colors can use our font style, shape and appearance options or can even use color codes to bring color as part of their credential. There is no excuse not to use this stylish, powerful security.

Don't burden yourself or your users with twenty-character passwords or Master Passwords with caps and syntax. Step up to smarter, more creative and cost-effective authentication and verification.

We present you highly secure digital vault "Rainbow Secure Vault" - **rSecureNote** that is protected by these amazing authentication and multi-factor technologies.

Get rSecureNote Today

  Organize your notes, settings, configurations in Team and Project Folders to save critical information.

rCloudStorage module within rSecureNote gives users ability to store and share important files. *Also available separately for you on your choice of major cloud hosting (MS Azure, AWS, Oracle cloud etc. as well on your own hosting through our partner relationships with them.*

rEncryptFile allows user to secure files using Rainbow file key and store it in sharepoint or network share. To decrypt, your client or customer do not need to download or install any software. No need to create any account either.

Get protected before you, your users or company gets attacked.

Reduce risk of non-compliance, business downtime, customer data loss and reputation.

We seek to replace all adhoc tools, weak password or system vaults, and all patchy solutions in enterprise that users use.

We also offer Rainbow smart multi factor to strengthen security of corporate business applications.

Even more

Work together securely

Team access for important notes and files mean work does not stop when somebody is out or not reachable. Shared access using Rainbow password and Smart lock means continue stay in compliance together and stay secure together. Few team members' weak passwords should not harm whole team's security cover.

Stay informed

All team members notified when notes or files are added, updated or deleted in shared folders.

Stay compliant and Aware with complete audit history

All user and admin actions are fully audited and available in read only mode to compliance officer and team leaders.
Audit records can be flagged and flagged items can be viewed, extracted separately to avoid information overload while doing advanced audit.

How do I get it

1. If you are SME, Individual or Business Professional, Subscribe to our SAAS based offering at **www.rSecureNote.com.**
    If you have more needs for encryption tool, Go to **www.rEncryptFile.com** to get File packs that suit your needs.

2. If you are Fortune 1000 Enterprise, ask us to get on premise or dedicated on cloud hosted version. You will be able to get customizations for security model and options.

    rEncryptFile: Get dedicated encryption tool outside of rSecureNote for your corporate wide use.

    To get rSecureNote as well as rEncryptFile, Email us Support@rSecureNote.com or info@rainbowpassword.com to get custom quote and access for your Business or Enterprise.

OWN IT, SECURE IT

Secure your vita data, applications and stay compliant. If you are SME and need help with cyber security assessment, our experienced partners will help you get compliant and stay CyberSmart and CyberSecure.
